

Winterization and restart inventory

Keep a component-by-component handover showing what was protected for storage and what must be restored before reuse. The record points to approved instructions; it does not supply a universal winterization sequence.

Record	Your information
Rig / storage location / planned storage dates	
Responsible person or provider / contact / work-order location	
Chosen approved method / coach and component manual versions	

Fitted component	Source page / storage action / date	Restart requirement / check / status
Freshwater tank / fill / pump		
Water heater or hydronic system		
Low-point drains / valves		
Interior faucets / toilet		
Exterior shower / utility branches		
Filters / treatment cartridges		
Washer / ice maker, if fitted		
Added or replaced plumbing		

Storage inventory follow-up

Record	Your information
Products/materials actually used / identification / evidence	
Undocumented component or unfinished storage work / next action	

Storage handover and restart sign-off

Record	Your information
Battery and charger / solar / other energy-source storage instructions and state	
Fuel / propane / ventilation / cover / tire instructions and facility rules	
What was disconnected, drained, bypassed, removed or left active / source / evidence	
Condition inspection dates / responsible person / findings	
Restart: restored settings and components / filled or flushed conditions / source and evidence	
Unresolved item / responsible person / planned review date	
Restart reviewed by / date / record location	

This is a handover record, not a repair or chemical-treatment recipe. Sign off each actual check; missing notes remain an open question. Use the separate departure checklist before road travel.
